

Electronic Monitoring
has EVOLVED...

“Check In Now”

VCheck24 for Juvenile Supervision

In some cases, an ankle monitor may inadvertently create stigmatizing situations or adverse treatment of juveniles being monitored, leading to inequities, negative self-image, and depression among the juvenile population. A combination of VCheck24's zone-triggering check-ins (school and home) and scheduled check-ins may facilitate a smoother transition for certain juveniles.

VCheck24 is also effective as a graduated sanction in between GPS ankle bracelet monitoring and no electronic monitoring...an incentive to do well on the ankle bracelet and graduate past it, but not a full removal of EM. Regular video check-ins allow the supervising agent to see and hear the client's voice as well as check the surrounding environment for any concerning images and sounds. Current features include:

- ✓ Scheduled, Random, On-Demand Check-ins
- ✓ Geo-fences of any shape/size, plus curfew scheduling & Zone-Triggered Check-Ins
- ✓ Instant Agent Alerts (E-Mail/Text)
- ✓ Data-Rich Caseload Monitoring Dashboard (w/ last valid GPS date/time)
- ✓ In-App Messaging with Participant Plus Auto Scheduled Reminders
- ✓ Automatic Daily / Weekly Client Activity and Alarm Reports
- ✓ No GPS Alerts - if client deletes the app, disables location, breaks phone
- ✓ COST SAVINGS
